Summary

Fresh Graduate in Informatics Engineering with interests in Data Analytics, Machine Learning, and Full Stack Development. Experienced in data processing, analysis, and visualization through various academic and personal projects, as well as in building web applications using modern technologies. Comfortable working across both front-end and back-end development, and continuously improving my skills to contribute to data-driven solutions and digital applications. Open to opportunities in Data Analytics, Machine Learning, or Full Stack Development.

Education

08/2022 – 05/2026
Kota Semarang,
Jawa Tengah

Bachelor of Informatics Engineering

Universitas Negeri Semarang

3.62/4.00

- Completed core coursework in Algorithms, Data Structures, Artificial Intelligence, Databases, and Computer Networks, building a strong foundation in software development.
- Developed practical experience through individual and team-based projects, including application development and problem-solving in programming.
- Strengthened analytical thinking, system design, and collaboration skills through active participation in discussions and project work.
- Conducted research on machine learning approaches for classification problems, including data preprocessing, feature selection, model optimization, and performance evaluation.

Professional Experience

09/2024 – 12/2024
Kota Batam,
Kepulauan Riau

Infinite Learning Indonesia (MSIB — Independent Study)

Game Artist

- Developed 3D games using Unity with a focus on level design and gameplay optimization.
- Collaborated in a team to design and implement gameplay systems and immersive game environments.
- Applied feedback from industry mentors to improve game design and development quality.
- Presented game development outcomes to mentors and peers as part of project evaluation and improvement.

02/2025 – 07/2025
Kota Semarang,
Jawa Tengah

Sekretariat Daerah Kota Semarang

Full Stack Developer

- Rebuilt the front-end of the TAPEM web platform to improve visual design and overall usability.
- Developed interactive user interfaces to support better user experience in accessing public service information.
- Contributed to making the website more structured, consistent, and easier to use.
- Designed, developed, and integrated front-end and back-end components for web applications.

Skills

- Python
 - Machine Learning
- SQL
 - Web Development
- Data Analysis
 - Git & GitHub

Projects

- 2024

Farmer's Journey
3D action game focused on combat and resource collection to repair and upgrade a house.
- 2025

TAPEM
A web platform that provides accessible public services and information with a focus on usability and efficiency.
- 2025

iMasjidHub
Modern web platform for managing mosque inventory, financial records, and daily activities.
- 2025

UMKM Juron
Web platform for promoting local products and supporting digital marketing for UMKM in Juron Village.
- 2026

Alzheimer's Disease Classification
Machine learning project for Alzheimer's disease classification using XGBoost, hybrid feature selection, and hyperparameter optimization to improve classification performance.
